2020 Safer at Home Catalog

UW Health
American Family Children’s Hospital
The Safety Center
More than a store… an educational center

Preventable injuries including those from falls, car crashes, burns, suffocation and poisoning are a leading cause of emergency department visits for children from the time they are born through their teenage years.

Most of these injuries can be prevented with the correct and consistent use of safety products such as bicycle helmets, car seats and life jackets, and by following best practice recommendations including children riding in the back seat until age 13 and keeping medications locked up in a secure location.

The Safety Center at American Family Children’s Hospital in Madison, WI was created to improve the health and well-being of kids and caregivers by offering safety products and individualized prevention education.

Staffed by knowledgeable and experienced safety experts, we offer personal education and one-stop shopping for the products you need to keep your family safe, with prices at or below online and traditional retailers. 100% of proceeds are reinvested in our injury prevention education and outreach initiatives.

While our store is closed to visitors during this time of social distancing, we are pleased to offer our line of car seats, bike helmets and home safety products for purchase via phone with delivery direct to your home. Our Safety Team are here to consult with you to answer any safety questions you have, and help you choose the products that best meet your needs. While our catalog does not include pricing, we are happy to provide price lists and quotes.

Infant Car Seats are designed for the littlest passengers, with most having upper weight limits between 22 and 35 lbs. They are used only rear-facing in vehicles, and can be used to carry the infant when outside of the vehicle; however, it is recommended that you limit the use of your infant car seat outside of the vehicle to short periods of time, and always keep your child buckled up in the harness.

### Cosco Comfy Carry
- Rear-facing, 4-22 lbs
- Multiple shoulder strap height positions
- Stay-in-car adjustable base
- Center front adjust harness adjuster for easier tightening and loosening

### Chicco Key Fit 30
- Rear-facing, 4-30 lbs
- Positioning insert for newborns
- Five-point harness w/ front adjust

### Britax B-Safe 35 Ultra
- Rear-facing 4-35 lbs
- Easy adjust harness height
- Increased side-impact protection
- Push-button LATCH attachments - ease of use.
- Stay-in-vehicle base

### Britax Endeavors
- Rear-facing 4-35 lbs
- Easy adjust harness height
- Increased side-impact protection
- Push-button LATCH attachments - ease of use.
- Stay-in-vehicle base with new anti-rebound bar

All-in-One Car Seats

All-in-One car seats are designed for use from birth through some part of booster seat use. The benefit of an all-in-1 car seat can be length of use, possibly limiting the number of car seats you might need to purchase over the course of time your child will need to ride in one. When using this type of car seat for a newborn or infant, note that the all-in-1 car seat should not be used as a carrier outside of the vehicle, and is not compatible for use with a stroller.

Britax One-4-Life ClickTight
- Rear-facing, 5-50 lbs
- Forward-facing 22-65 lbs
- Booster 40-120 lbs
- 15-position quick-adjust headrest/harness
- 9 position reclines
- ClickTight easy installation feature

Britax One-4-Life Clean Comfort
- Rear-facing 5-40 lbs
- Forward-facing 22-65 lbs
- Booster 40-100 lbs
- Includes anti-rebound bar used rear-facing to stabilize and minimize crash forces
- Stain-resistant fabric, wicking keeps child cool and dry

Evenflo EveryStage DLX
- Rear-facing to 4-50 lbs
- Forward-facing 5-point harness starting at 2 years and 22-65 lbs
- Booster 40-120 lbs.
- Five-point harness w/infinite slide adjustment
- Reclines forward facing for comfort
- EasyClick LATCH connectors make install easy

Diono Radian 3R/3RXT Clearance!
- Rear-facing 5-40 lbs
- Forward-facing 5-point harness 22-65 lbs
- Booster seat to 100 lbs
- Folds for easy carrying and storage
- Excellent choice when fitting 3 across

- Rear-facing 5-45 lbs
- Forward-facing 5-point harness 22-65 lbs
- Booster seat to 120 lbs
- Folds for easy carrying and storage
- Excellent choice when fitting 3 across
- Also available in Dark Gray

Prices and product availability subject to change without notice
Convertible car seats can be used both rear and forward-facing. Most can be used for a newborn starting at around five pounds, and many come with positioning inserts to assist with harness fit for a newborn. Most convertible car seats can be used rear-facing until the child reaches 40 pounds, some longer. Once a child has outgrown the rear-facing limit, a convertible car seat can be turned forward-facing until and used up to the manufacturer’s maximum height and weight limit.

**Evenflo Sonus**
- Rear-facing, 5-40 lbs
- Forward-facing 22-50 lbs
- 5-point harness with 5 height adjustments

**Evenflo Stratos**
- Rear-facing 5-40 lbs
- Forward-facing 22-65 lbs
- 5-point harness with 5 height adjustments
- Internal head support with side impact protection

**Chicco NextFit Zip**
- Rear-facing 4-40 lbs
- Forward-facing 22-65 lbs
- Easy adjust harness height
- 9 recline positions, including some forward-facing, zip-off cover
- SuperCinch makes LATCH installation easy

**Chicco NextFit Zip Max Air**
- Extended rear-facing 4-50 lbs
- Forward-facing 22-65 lbs
- Can provide more leg room in rear-facing mode
- Easy adjust harness height
- Dual cupholders, cover zips off for easier cleaning

Convertible Car Seats (continued)

Convertible car seats can be used both rear and forward-facing. Most can be used for a newborn starting at around five pounds, and many come with positioning inserts to assist with harness fit for a newborn. Most convertible car seats can be used rear-facing until the child reaches 40 pounds, some longer. Once a child has outgrown the rear-facing limit, a convertible car seat can be turned forward-facing until and used up to the manufacturer’s maximum height and weight limit.

**Britax Allegiance**
- Rear-facing, 5-40 lbs
- Forward-facing 22-40 lbs
- 5-point harness with front adjuster
- Side impact protection
- Push-button LATCH for easy installation

**Britax Marathon ClickTight**
- Rear-facing 5-40 lbs
- Forward-facing 20-65 lbs
- 5-point harness, adjustable headrest
- Complete side-impact protection
- ClickTight design simplifies installation in most vehicles

**Britax Boulevard ClickTight**
- Rear-facing 5-40 lbs
- Forward-facing 20-65 lbs
- 5-point harness, adjustable headrest
- Two layers of side-impact protection
- ClickTight design simplifies installation in most vehicles

**Britax Boulevard ClickTight Clean Comfort**
- Rear-facing 5-40 lbs
- Forward-facing 20-65 lbs
- 5-point harness, adjustable headrest
- Two layers of side-impact protection
- ClickTight design simplifies installation in most vehicles
- Stain-resistant fabric, wicking keeps child cool and dry
- Includes anti-rebound bar used rear-facing to stabilize and minimize crash forces

Convertible car seats can be used both rear and forward-facing. Most can be used for a newborn starting at around five pounds, and many come with positioning inserts to assist with harness fit for a newborn. Most convertible car seats can be used rear-facing until the child reaches 40 pounds, some longer. Once a child has outgrown the rear-facing limit, a convertible car seat can be turned forward-facing until and used up to the manufacturer’s maximum height and weight limit.

Britax Advocate ClickTight Safe Wash
- Rear-facing 5-40 lbs
- Forward-facing 20-65 lbs
- 5-point harness, adjustable headrest
- Three layers of side-impact protection
- ClickTight design simplifies installation in most vehicles
- Safe Wash fabric covers are safe to machine wash and dry

Child Passenger Safety Best Practice Recommendations
- Keep infants and toddlers rear-facing as long as possible. The Safety Center has a some car seats that allow you to keep your child rear-facing up to 50 lbs.
- Then, keep your kids in a harnessed car seat as long as possible. A five-point harness is the safest way for your child to ride, in some car seats up to 65 lbs.
- Then, keep your kids in booster seats until the seat belt fits them correctly without a booster, with seat belt low over the hips and shoulder belt across center of shoulder. Most children will not fit in the adult seat belt until they are at least 57 inches (4’9”) in height, which might not be until age 10 or older for some kids.
- Then, continue to keep your kids in the back seat until they turn 13. The back seat can be safer for most children in crashes under 13, when they reach the point of development when deploying front airbags are not a danger to properly-restrained passengers.

Transporting Children with Special Healthcare Needs
Safety Center staff offers transportation safety evaluations for families of children with unique or extra needs. Contact us for more information on specialized adaptive safety restraints and to schedule an assessment.

# Harnessed Booster Seats

**Harnessed Booster** car seats are designed for older toddlers who are riding forward-facing. They are also referred to as combination seats, because they have a 5-point harness and can later be used without the harness to correctly position the vehicle lap and shoulder belt. Kids should ride in a 5-point harness as long as possible before transitioning to a belt-positioning booster, at least until 4 years and 40 lbs. Then, kids should ride in a belt-positioning booster until the seat belt fits correctly without one, usually when the child is at least 57 inches (4’9”) tall.

## Cosco Finale
- Forward-facing only
- 5-point harness 30-65 lbs
- Belt-positioning booster 40-100 lbs
- Fits well in most vehicles
- Cup holder included

## Chicco KidFit
- Forward-facing only, age 2 and up
- 5-point harness, 25-65 lbs
- Belt-positioning booster 40-100 lbs
- Recline positions for comfort
- Two built-in cup holders

## Britax Grow With You ClickTight
- Forward-facing only, age 2 and up
- 5-point harness 22-65 lbs
- Belt-positioning booster 40-120 lbs
- Easy adjust height
- Two layers side-impact protection
- ClickTight easy installation feature

## Britax Grow With You ClickTight Plus
- Forward-facing only, age 2 and up
- 5-point harness 22-65 lbs
- Belt-positioning booster 40-120 lbs
- Easy adjust height
- Three layers side-impact protection
- ClickTight easy installation feature
- Safe Wash fabric covers are safe to machine wash and dry

## Booster Seats

**Booster** car seats are designed for kids who have outgrown harnessed car seats but are still not big enough to correctly fit in a vehicle lap and shoulder belt. They raise the child up to help the shoulder belt fit across the center of the child’s shoulder, and keep the lap belt low on the hips. At minimum they need to be age 4 and weigh at least 40 lbs to ride in a booster. There are many harnessed car seats that will carry a child to 65 lbs, which can be far beyond age 4; kids should ride in a harnessed car seat as long as possible before transitioning to riding in a booster.

### Evenflo Big Kid Highback
- Belt-positioning booster 40-110 lbs, 40-57”
- Minimum age 4
- 6 height positions
- 2 built-in cupholders
- Converts to no-back booster

### Chicco KidFit Highback
- Belt-positioning booster 40-100 lbs
- Adjustable headrest for taller kids
- Armrests and cupholders
- Uses lower LATCH attachments to secure when child not riding in booster
- Converts to no-back booster

### Britax Highpoint 2-Stage Highback
- Belt positioning booster 40-120 lbs, 44-63”
- Converts to no-back booster 48-120 lbs, 46-43”
- 10-position adjustable headrest
- SecureGuard clip secures and positions vehicle lap belt

### Diono Everett NXT Highback
- Belt-positioning booster 40-120 lbs, 38-63”
- 7-position adjustable headrest
- Narrow vehicle fit compared to some boosters
- Rigid push-on lower LATCH attachments

# Hardware-mounted Gates

Hardware-mounted gates are held in place by mounts that are secured with screws to walls, door frames or other structures. A hardware-mounted gate is able to withstand more pushing force against it than a pressure-mounted gate, so it is recommended when a gate is needed at the top of a stairway or landing. Hardware-mounted gates can also be used in any other area where security of the gate is important.

**Pressure-mounted Gates**

Pressure-mounted gates are held in place by pressure that is created by adjusting the width of a gate using the tensioner provided with the gate. This type of gate can be used in between rooms or areas on the same level, and at the bottom of stairways or landings. Because tension, which holds this type of gate in place, can release over time due to force applied to the gate, pressure-mounted gates are not recommended for use at top of stairways or landings. For these locations, a hardware-mounted gate should be used.
